RE: Application 61-12256 Summary

The application was filed in early 2008 to expand the "Mayfield Springs" project originally approved under 63-32225, a 10 cfs municipal permit (1st approval of the I84 group). That permit covered Ada County wells. This new application proposes Elmore county wells for a POU similar to 63-32225. The application proposes another 13.76 cfs municipal use for the expanded project. The application does not propose separate fire protection flow.

The site straddles the Ada-Elmore county lines on the north side of I84 near the Stage Stop truck stop.

IDWR sought additional information on 3/19/2010 – water supply, injury, impacts on GWMA and CGWA sites and so forth. SPF replied for the applicant in November 2010 and included a request for more time to provide the rest of the information. That request was approved and included several benchmarks to monitor progress as the new deadline approached. SPF provided more replies for those benchmark dates, culminating in a timely submittal of information by May of this year.

Legal notices resulted in multiple protests. Some/most of the protestants are involved in other pending applications along the I84 corridor. This application is the second most junior of the group of proposals for that area.
